RE: Semicoa Transition Update

Dear Valued Customer

As previously announced, Semicoa will remain active in the market and continue to support our customers.

Semicoa will utilize its extensive inventory of finished die and fully tested packaged devices to serve our customers during this transition period. Additionally, Semicoa will establish production, assembly and test capabilities required for new orders of Source Controlled Drawing devices or MIL-PRF-19500/JAN-qualified devices.

OSIO has begun the transition of the Semicoa division operations to OSIO's Hawthorne, CA facility to maintain core and proprietary manufacturing competencies and support the needs of its valued customers for JAN-qualified product offerings and Source Controlled Drawing products. The goal is to complete this transition before year-end, and we will continue to update you during the transition period.

Please do not hesitate to submit your orders to our customer support team at orders@semicoa.com.

Thank you for being one of our valuable customers and supporting SEMICOA for more than five decades.

Sincerely,

John Park
Vice President/General Manager
